Preface to the second edition	v
Preface to the first edition	vii
<b>I Mathematical finance in one period</b>	<b>1</b>
<b>1 Arbitrage theory</b>	<b>3</b>
1.1 Assets, portfolios, and arbitrage opportunities . . . . .	3
1.2 Absence of arbitrage and martingale measures . . . . .	6
1.3 Derivative securities . . . . .	14
1.4 Complete market models . . . . .	23
1.5 Geometric characterization of arbitrage-free models . . . . .	27
1.6 Contingent initial data . . . . .	31
<b>2 Preferences</b>	<b>44</b>
2.1 Preference relations and their numerical representation . . . . .	45
2.2 Von Neumann–Morgenstern representation . . . . .	51
2.3 Expected utility . . . . .	61
2.4 Uniform preferences . . . . .	74
2.5 Robust preferences on asset profiles . . . . .	86
2.6 Probability measures with given marginals . . . . .	99
<b>3 Optimality and equilibrium</b>	<b>108</b>
3.1 Portfolio optimization and the absence of arbitrage . . . . .	108
3.2 Exponential utility and relative entropy . . . . .	116
3.3 Optimal contingent claims . . . . .	125
3.4 Microeconomic equilibrium . . . . .	137
<b>4 Monetary measures of risk</b>	<b>152</b>
4.1 Risk measures and their acceptance sets . . . . .	153
4.2 Robust representation of convex risk measures . . . . .	161
4.3 Convex risk measures on $L^\infty$ . . . . .	171
4.4 Value at Risk . . . . .	177
4.5 Law-invariant risk measures . . . . .	183
4.6 Concave distortions . . . . .	188
4.7 Comonotonic risk measures . . . . .	195
4.8 Measures of risk in a financial market . . . . .	203
4.9 Shortfall risk . . . . .	212

<b>II</b>	<b>Dynamic hedging</b>	221
<b>5</b>	<b>Dynamic arbitrage theory</b>	223
5.1	The multi-period market model . . . . .	223
5.2	Arbitrage opportunities and martingale measures . . . . .	227
5.3	European contingent claims . . . . .	234
5.4	Complete markets . . . . .	245
5.5	The binomial model . . . . .	248
5.6	Exotic derivatives . . . . .	253
5.7	Convergence to the Black–Scholes price . . . . .	259
<b>6</b>	<b>American contingent claims</b>	277
6.1	Hedging strategies for the seller . . . . .	277
6.2	Stopping strategies for the buyer . . . . .	282
6.3	Arbitrage-free prices . . . . .	292
6.4	Stability under pasting . . . . .	297
6.5	Lower and upper Snell envelopes . . . . .	300
<b>7</b>	<b>Superhedging</b>	308
7.1	$\mathcal{P}$ -supermartingales . . . . .	308
7.2	Uniform Doob decomposition . . . . .	310
7.3	Superhedging of American and European claims . . . . .	313
7.4	Superhedging with liquid options . . . . .	322
<b>8</b>	<b>Efficient hedging</b>	333
8.1	Quantile hedging . . . . .	333
8.2	Hedging with minimal shortfall risk . . . . .	339
<b>9</b>	<b>Hedging under constraints</b>	350
9.1	Absence of arbitrage opportunities . . . . .	350
9.2	Uniform Doob decomposition . . . . .	357
9.3	Upper Snell envelopes . . . . .	362
9.4	Superhedging and risk measures . . . . .	369
<b>10</b>	<b>Minimizing the hedging error</b>	372
10.1	Local quadratic risk . . . . .	372
10.2	Minimal martingale measures . . . . .	382
10.3	Variance-optimal hedging . . . . .	392
	<b>Appendix</b>	399
A.1	Convexity . . . . .	399
A.2	Absolutely continuous probability measures . . . . .	403
A.3	Quantile functions . . . . .	406
A.4	The Neyman–Pearson lemma . . . . .	414

A.5	The essential supremum of a family of random variables . . . . .	417
A.6	Spaces of measures . . . . .	418
A.7	Some functional analysis . . . . .	428
	Notes	433
	References	439
	List of symbols	449
	Index	451
